

Filtering

Help Documentation

Filtering

Folder Auto-clean

Folder Auto-clean is a method for limiting how much of your account disk space is used by the Junk E-Mail, Sent Items, and Deleted Items folders. By placing limits on the size of these folders, you can help ensure that your account does not fill up unnecessarily. Messages are deleted from the folders in the order that they were received so that older messages get deleted first.

To access the folder auto-clean settings, click the settings icon . Then expand the My Settings and Filtering folders and click Folder Auto-Clean in the navigation pane. Note: Depending on the policies your administrator has established, you may or may not be able to change the settings on this page.

The folder auto-clean settings will load in the content pane and the following tabs will be available:

Options

Use this tab to specify the following options:

- Use default auto-clean settings - Select this checkbox to adopt the auto-clean policy set by your email host or domain administrator. Note: If the administrator changes the policy, yours will automatically change with too.
- Override auto-clean settings for this account - Select this checkbox to override the settings set by your administrator. Any changes you make will not be affected if the administrator changes their policy, unless they disable user overrides.

Folder Settings

If you are using the default auto-clean settings set up by your administrator, they will appear on this tab. If you chose to override the settings, you can click Add Rule in the content pane toolbar to create your own auto-clean policies based upon size or date.

These options will be visible if size is chosen:

- Folder Size Before Auto-clean - The maximum size of the folder. Once the folder reaches this size, the auto-clean process is started and older messages (messages that were received the longest time ago) are deleted.
- Folder Size After Auto-clean - The goal size of the folder. When auto-cleaning, SmarterMail will delete older messages until the folder reaches this size. Note: This number should always be lower than the "before" number.

- Enable auto-clean for this folder - Select this box to activate auto-cleaning of the selected folder.

These options will be visible if date is chosen:

- Mail Age - The maximum number of days mail will stay in the selected folder before deletion.
- Enable auto-clean for this folder - Select this box to activate auto-cleaning of the selected folder.

Content Filtering

Content filtering is an advanced method of performing actions on emails that meet specific criteria. For example, you can use content filters to delete messages with certain attachments, forward messages from a specific email address to another account, or even alter the subject of specific types of email. Content filtering is very flexible in order to allow you to filter messages the way you want to.

To access your content filtering settings, click the settings icon . Then expand the My Settings and Filtering folders and click Content Filtering in the navigation pane.

To add a new filter, click New in the content pane toolbar. The content filter wizard will load in the content pane.

To edit an existing filter, select the desired filter and click Edit in the content pane toolbar.

Note: Content filters are executed in the order in which they show up in the list. When a content filter gets triggered and performs an action, no other content filtering is performed on that message. To change the order, click on the arrows next to a filter.

Content Filter Wizard

The New Content Filter wizard is three pages long, and it will walk you through each step necessary to create the filter.

Step 1 - Filter Criteria

In this step of the wizard, choose the type of things that the filter will look at. Possible filter criteria types are listed at the end of this help topic. Multiple criteria can be chosen, and you can choose in the next step whether all criteria must be met, or only one of the criteria for the filter to activate.

Step 2 - Filter Type and Criteria Details

Choose whether this filter requires one criterion to be met from each and every section, or just one of the criteria in any section to be met, before an action is performed. Then choose whether you will be

using any wildcards in your search strings. Usually, wildcards will not be necessary, but there are times when some people may want them.

For each of the criteria you chose in step 1, you will be able to enter details. Many types of content filters allow lists of items to be entered in, and these will be indicated. For example, if you chose to filter on From Address, you can enter multiple email addresses in the box (one per line) and if a message is from any of them, that criteria will be met.

You also have the ability to reverse the logic of a specific criteria item by changing the "matches" box to "does not match."

Step 3 - Rule and Actions

A summary of your content filter rule will appear near the top of the page. Check that it is filtering the way you intend, and enter a name for the rule so that you can easily identify it later.

Choose one or more actions to take when a message matches this filter. The available actions are explained below:

- Delete message - Deletes the message so that it will never arrive at your Inbox. Messages deleted through content filtering are not recoverable.
- Bounce message - Sends a message back to the sender of the email saying that the message was bounced. Note that the message is still delivered to you unless you choose to delete it as well. Note: If the system administrator has disabled bouncing, this option will function the same as the delete action.
- Move message to folder - Delivers the incoming message to the folder you choose from the drop-down list. If you later delete that folder and leave the content filter active, the filter will automatically create the folder when the action is triggered.
- Prefix subject with comment - Useful for categorizing emails, the subject line will be altered to include the text you specify in the Comment box.
- Embed header line into message - Includes an email header into the message, which can be useful when performing additional filtering through Outlook or another email client. Headers should be formatted like "X-someheadername: value"
- Copy message - Forwards a copy of the message to another email address and leaves a copy of the message in your account as well.
- Reroute message to another email address - Forwards the message to another email address instead of this one. Will not store a copy of the email in your own account.

Content Filter Types

From Address

- From specific addresses
- From specific domains
- From trusted senders

Contains Specific Words or Phrases

- Subject
- Body Text
- Subject or Body Text
- From Address
- To Address
- Email Headers
- Anywhere in Message

To Address

- To Specific Addresses
- To Specific Domains
- Only to Me
- My Address in To Field
- My Address not in To Field
- My Address in To or CC Field

Attachments

- Has any Attachment
- Specific Filenames
- Specific Extensions
- Over Specific Size

Other

- Message over Size
- Message under Size
- Received in Date Range
- Sent through a Specific Server (by IP)
- Spam Probability
- Flagged as High Priority
- Flagged as Normal Priority
- Flagged as Low Priority
- Message is Automated (no return address)

Spam Filtering

SmarterMail includes many antis spam measures that will help keep your inbox free of unwanted mail. Your domain administrator has probably already set up some basic spam filtering options.

To view your spam filtering settings, click the settings icon . Then expand the My Settings and Filtering folders and click and click Spam Filtering in the navigation pane. The spam filtering settings will load in the content pane and the following tabs will be available:

Options

Use this tab to specify the following settings:

- Use default spam settings - Select this checkbox to accept the default spam options provided by your domain administrator.
- Override spam settings for this account - Select this checkbox to customize the way spam is handled and to override the settings created by the domain administrator.

Actions

When you override the spam options set by your system administrator, you can choose the actions that are taken when email comes in that has a low, medium, or high probability of being spam. For each spam level, choose the action you wish to have taken. If you choose to add text to the subject line of messages, type the text in the box below the action drop down. Note: If you are using the default spam options that were set up by your administrator, these settings cannot be edited.

Current Weights

Each type of spam check has an associated weight that factors into the spam probability of a message. When an email comes in, all of the checks listed are run, and for each check that the message fails, the weight is added to the overall score of the email. The thresholds for each spam probability are examined, and the email is placed into the appropriate category.
