

Message Footer

Help Documentation

Message Footer

System administrators can configure server-wide message footers that SmarterMail will append on all outgoing and incoming messages. Although similar to signatures, message footers are typically used to convey disclaimers or provide additional information. For example, a system administrator may want every message to include a notice that the message was scanned for viruses or the text "Sent by SmarterMail."

To access the message footer options, click the settings icon and click Message Footer in the navigation pane. The message footer settings will load in the content pane and the following tabs will be available:

Options

Use this tab to specify the following settings:

- Enable footer for all messages - Select this option to turn the message footer on.
- Apply to mailing lists - Select this option to append the message footer to mailinglist messages. Note: Mailing lists have their own configurable footers, so enabling this option will append a second footer at the end of each message. Because this may be confusing for mailing list moderators and recipients, most administrators will choose to keep this option disabled.
- Enable domains to override footer settings - Select this option to allow domain administrators to configure their own message footer for the domain.

Footer

Use this tab to create the message footer text. Note: The message footer does not support the use of variables.
