

# Default Domain Settings

Help Documentation

## Default Domain Settings

From this page you can create global default settings that will automatically be used when adding a new site through either the Web Interface or through Web Services. These default settings can be overwritten and are only intended to avoid needless data entry.

The settings on this page are identical to those found in the topic [Editing a Domain](#) .

Note: Changing these settings has no bearing on domains that have already been setup, unless the "Propagate Settings" option is used.

### Propagating Settings

To apply some or all of the default settings to all domains on your server, change the settings to how you want them, and then click on the Save and Propagate Settings button. Check all of the settings that you want to apply to your domains, then click on the Propagate Now button.
