

Logging in to SmarterMail

Help Documentation

Logging in to SmarterMail - System Admin

You will need to open a web browser to the location of your SmarterMail installation. By default, this URL is `http://127.0.0.1:9998` (if running the browser on the server itself, otherwise use the IP address of the server instead of 127.0.0.1), but it may be different if you have changed the location of SmarterMail.

The screenshot shows a web browser window titled "Please log in to SmarterMail...". The page contains the following elements:

- A text input field labeled "Full email address (ex. user@example.com)" with the text "admin" entered.
- A password input field labeled "Password" with seven black dots representing the password.
- A dropdown menu labeled "Language" with the selected option "Use Browser Language".
- A checkbox labeled "Remember me" which is currently unchecked.
- Two buttons: "Login" and "Help".
- A footer at the bottom of the page that reads "Copyright © 2003-2006 SmarterTools Inc."

To login to SmarterMail, type in the system admin username and password on the login screen. By default, the username and password are both "admin" (without the quotes). If everything matches up, you will be presented with the manage domains page or the activation wizard (if you have yet to activate SmarterMail).

One thing to notice on the Login page is the "Remember Me" checkbox. By checking this box SmarterMail encrypts your login and password. You can then close the browser window and not have to re-log in when you return. This function works as long as you do not "log out" of SmarterMail prior to closing your browser window. If you do log out, you will have to log back in upon your return, regardless of whether the "Remember Me" box was checked or not. You will need cookies enabled on your browser for this feature to work.
