

Domain ral Settings

Help Documentation

General Settings

Domain administrators will use this section to adjust any general domain settings. To access this section, click the Settings button on the main toolbar and click the Settings navigation pane. Then expand the Domain Settings folder and click General Settings from the left tree view. The general settings will load in the content pane and the following tabs will be available:

Skin Use this tab to choose a default skin for all of the mailboxes on a specific domain. Note: If the system administrator does not allow users or domain administrators to override the system settings, this tab will not be visible.

- Default Skin - Select the skin you wish to set as the default from the list.
- Enable Users to Override Skin - Select this option to allow users to choose their own mailbox skin.

Sharing

When a user adds a member from the Global Address List as an attendee on a calendar appointment, SmarterMail can alert the user of any potential scheduling conflicts. In addition, the user can view an Availability window to review the times that their attendee is free/busy. The following setting impacts whether the calendar availability of GAL members is shown in the calendar conflicts and availability window:

- Enable public availability for all users - This setting is enabled by default and will allow users on the domain to review scheduling conflicts and availability for members in the Global Address List. When unchecked, domain users' scheduling information will not be displayed in the appointment window.

Mailing Lists

Use this tab to specify the following mailing list settings:

- Web Mail URL - The URL for the SmarterMail login page. Note: URLs should include the http:// prefix. For example: http://mail.example.com/
- Enable - Select this option to enable XXX
- Deletion Bounce Threshold - The number of times a message to a specific subscriber may bounce before the subscriber removed from the mailing list. By default, the threshold is set to 5.
- Enable - Select this option to enable the deletion bounce threshold. By default, this setting is enabled.
