What is SmarterMail?

SmarterMail is fully RFC compliant mail server package that is able to support anywhere from one to an unlimited number of domains and an unlimited number of email addresses and that includes complete webmail and anti-spam features. It is built and priced to be both beneficial and accessible to individuals, small businesses, and enterprise-level organizations alike.

SmarterMail provides end users with advanced features such as mail account statistics, user level skinning, and precise user-controlled spam and content filtering. Domain administrators have the ability to set and retrieve domain level statistics, provide domain-level spam and content filtering (versus having individual end users set their own), administer spam using any number of different spam and black lists (e.g. SpamCop, SpamAssassin, ORDB, and others), set a domain-level skin, set domain-level aliases, implement SMTP authentication, and much more.

As an added benefit, both the administrative functions of SmarterMail, as well as end user capabilities are accessible from a standard web browser, giving administrators and end users access and control at anytime, from anywhere. SmarterMail uses industry standard mail protocols, such as POP3 and IMAP4 for incoming mail and SMTP for outgoing mail. It is also compatible with most popular desktop email clients (e.g. Microsoft's Outlook and Outlook Express or Qualcomm's Eudora).
