

Configure Network

Help Documentation

Step 6: Configure the Network

Now that you've created your domain, you'll need to configure the DNS and port settings for the domain. Configuring DNS settings is important because these settings tell the Internet where to send email on your domain. For step-by-step instructions on configuring DNS settings, see the KB article [How To - Configure DNS for a Domain](#) . In addition, you will need to ensure that the ports on your firewall is open for ports 25, 110, and 143. Note: Your ISP might block specific ports, so it is recommended to contact your ISP to ensure SMTP traffic on these ports is allowed.
