

Hostnames

Help Documentation

Hostnames

This feature allows administrators to assign a hostname for each IP address. For example: IP 1.1.1.1 can be assigned to mail.domain1.com and IP 1.1.1.2 can be for mail.domain2.com.

To view hostnames, click the manage icon and click Hostnames in the navigation pane. A list of hostnames will load in the content pane and the following options will be available from the content pane toolbar:

- New - Creates a new hostname.
- Edit - Edits the selected hostname.
- Delete - Deletes the selected hostname(s).
