Automating LogIn to SmarterMail

</body>

The HTML code below demonstrates how you can make a text link (e.g. "Log into your mail") that automatically logs a user in to the SmarterMail application. By putting a hidden form on a simple web page, you can fill in the "Email Address", and "Password" information either via hard coding the data or through a scripting language like ASP, ASP.Net, or ColdFusion.

For the example code listed below, we have the form values set to generic text (e.g. "Actual_Email_Address_Here") to show where you would hard code values that are submitted to the login.aspx page. You could also dynamically generate these values using a scripting language like ASP or ColdFusion (a sample ASP script would substitute value="Actual_Email_Address_Here" with value=<% =email %>). The form action shown (http://127.0.0.1:9998/smartermail/login.aspx) uses the default location of the Smartermail Web Interface. If you have created a separate web site for Smartermail, or assign a different IP address for Smartermail within IIS, this action would have to be altered to reflect this change. This example demonstrates how easy and powerful the Smartermail

```
application is in allowing companies to automate entry into the mail application.

<html>
<head> <meta http-equiv= "Content-Language" content= "en-us" > <meta http-equiv= "Content-Type" content= "text/html; charset=windows-1252 "> <title>Smartermail Login</title> </head>

<head>
<h
```
