IP Addresses

This report displays information about the IP addresses that accessed your website during the selected date range. The IPs are listed in descending order based on the number of page views generated by the IP. This report can prove useful if your site is under attack, as it can help you determine who your attacker is (or at least his proxy).

Note: This report can be added as a report item to a custom or favorite report. It may also be used in the creation of standard reports. For more information on report items, refer to [Understanding Report Items](#) .

For a definition of the terms listed on this page, please refer to the [Glossary](#) .
