Server Responses

Spider 404 - Page Not Found

This report displays a list of the files that a spider attempted to access that no longer exist on the server, possibly because they were deleted, they were never created, or the URL was misspelled. While some 404 errors are common due to user error, many 404 errors to a specific resource indicate a problem with your site. Typically, a 404 result to a spider will result in the page being removed from the spider's index and could affect your SEO efforts.

Note: This report can be added as a report item to a custom report. For more information on report items, refer to [Understanding Report Items](#) .

Spider 5xx - Server Errors

This report displays a list of the files that resulted in an internal server error when trying to process the request. These errors tend to be with the server itself, not with the request, and usually occur when there is a problem on your web server preventing the data from being returned (usually a scripting problem). While some 5xx errors occur due to server restarts, any 5xx error that occurs more than a few times should be investigated.

Spiders encountering 500-level errors will usually try loading the page again later. After several failed retries, the page will likely be removed from the spider's index.

Note: This report can be added as a report item to a custom report. For more information on report items, refer to [Understanding Report Items](#) .
