Time Logs

Time Log Categories

System administrators can create categories to organize time logs into related groups. For example, if a system administrator wants to easily track how much time is spent working for a specific customer, he can create a category for that customer. Then, whenever an agent creates a time log for an issue concerning that customer, the agent can assign it to the appropriate category.

To access time log categories, click the settings icon . Then expand the System Settings and Time Logs folders and click Time Log Categories in the navigation pane. A list of time log categories will load in the content pane.

In general, the following columns are available:

- **Checkbox** - Use these boxes to select multiple time log categories. Time log categories must be selected before choosing an action from the toolbar.
- **Category Name** - The name of the time log category.
- **Description** - A short description of the time log category

In general, the following options are available in the content pane toolbar:

- **New** - Creates a new time log category.
- **Edit** - Allows the agent to edit an existing time log category.
- **Delete** - Permanently deletes the selected time log category.
- **Refresh** - Refreshes the list of time log categories in the content pane.

To view a specific time log category, simply double-click the appropriate time log category. The time log category will load in a popup window and the following fields will be available:

- **Category** - The name of the time log category.
- **Description** - A short description of the time log category.
