Performing a Site Tuning Scan

Users and site administrators can use SmarterStats' site tuning functionality to scan their site for more than 20 problems known to affect a site's search engine ranking, such as broken links, excessive linking, META and title tags, and multiple redirects.

To perform a site scan, click the Site Tuning icon. Then click Site Tuning Details in the navigation pane. The site tuning details will load in the content pane and the following options will be available in the content pane toolbar:

- Scan Site - Scans/re-scans the site for errors or potential issues affecting the visitor experience and search engine ranking.

Depending on the size of your website, the site tuning may take a few seconds or a few minutes. For more information on site tuning and the possible issues it identifies, see [Site Tuning Overview](#) .
